

## The Syntax Approach

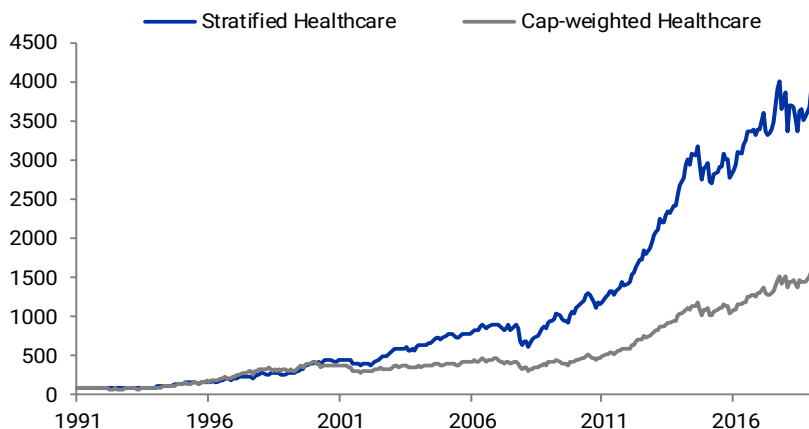

Syntax Stratified Indices<sup>™</sup> use a patented investment technology to diversify the most widely followed indices. Stratified Weight Indices address the related business risk concentrations that frequently occur in capitalization-weighted indices. The goal is to deliver an unbiased return that is representative of all the business opportunities in the market, not just the largest ones.

The Syntax Stratified Healthcare Index is a subset of the S&P 900 universe comprising FIS-defined Healthcare companies. A stratified weighting scheme is applied to produce more diversification than traditional cap-weighted indices.

Index performance does not represent actual fund or portfolio performance and such performance does not reflect the actual investment experience of any investor. An investor cannot invest directly in an index. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in a portfolio invested in accordance with an index. None of the Syntax Indices or the benchmark indices portrayed herein charge management fees or incur brokerage expenses, and no such fees or expenses were deducted from the performance shown; provided, however, that the returns of any investment portfolio invested in accordance with such indices would be net of such fees and expenses. Additionally, none of these indices lend securities, and no revenues from securities lending were added to the performance shown.

Volatility (vol.) is the annualized standard deviation of index returns. The Sharpe ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio indicates better risk-adjusted performance. Volatility and the Sharpe Ratio are calculated using monthly data over the past ten years. Weighted Average Stock Price-to-Earnings Ratio (P/E Ratio) is the harmonic weighted average of the ratio of each stock's share price to its trailing 12 month earnings per share. Weighted Average Stock Price-to-Book-Value Ratio (P/B Ratio) is the harmonic weighted average of the ratio of each stock's market price to its net asset value. Dividend Yield is the weighted average of the ratio of each stock's annual dividend per share to its market price. Price-to-Earnings, Price-to-Book and Dividend Yield are calculated as of the Factsheet period-end. P/E, P/B, Dividend Yield, and Turnover are calculated by Syntax via FactSet.
